J\_ ... . ..

1. A copy of WO 00 49423 cited on enclosed PTO-1449 filed on 6/6/05 has not been received.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 12-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Rooyen (US 2004/0234012).

Rooyen teaches a device for measuring angular positions including at least two antenna elements 102; 602, 604; a phase shifter 110 arranged in a signal path of at least one of the at least two antenna elements, wherein the phase shifter is configured to switch between different phase states in a time-division multiplexing manner to change a radiation characteristic of the at least one of the at least two antenna elements; and an evaluation unit 116; 660 to jointly evaluate signals received from the at least two antenna elements.

4. Claims 12-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Acampora (Pat. No. 4,232,266).

Acampora teaches a device for measuring angular positions including at least two antenna elements 30<sub>1</sub>, 30<sub>2</sub>; a phase shifter 34<sub>1</sub> arranged in a signal path of at

least one of the at least two antenna elements, wherein the phase shifter is configured to switch between different phase states in a time-division multiplexing manner to change a radiation characteristic of the at least one of the at least two antenna elements; and an evaluation unit 42<sub>1</sub> to jointly evaluate signals received from the at least two antenna elements.

5. Claims 12-23 are rejected under 35 U.S.C. 102(b) as being anticipated by MacDonald et al (Pat. No. 4,686,533).

MacDonald et al teach a device for measuring angular positions including at least two antenna elements 23; a phase shifter (fig. 5) arranged in a signal path of at least one of the at least two antenna elements, wherein the phase shifter is configured to switch between different phase states in a time-division multiplexing manner to change a radiation characteristic of the at least one of the at least two antenna elements; and an evaluation unit 26 to jointly evaluate signals received from the at least two antenna elements.

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dao L. Phan whose telephone number is (571)272-6976. The examiner can normally be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on (571)272-6979. The fax phone number
